[BM1] I'm not quite sure if the latest versions of the standards should be referred to in appendix F (page 421),e.g. the latest VITAL standard is IEEE Std 1076.4-2000. [Also, 1076.6-2004].

[RM1] Comments: Since this is a relatively "large" change (additional clauses seem to be about as big as the baseline spec of 14 clauses), I'm hoping that more examples would be provided and/or someone in the VHPI group is working on a tutorial/user's guide.
