Errata: CS44L10 Rev B

(Reference CS44L10 Data Sheet revision DS541PP1 dated May '01)

The VD and VL power input pins must be operated at the same voltage. The recommended operating voltage range for VD and VL remains 2.4 volts minimum to 5.0 volts maximum.

Power provided to the HP_A and HP_B pins may be provided at a voltage level different from that used for VD and VL, as specified in the data sheet.
