Virtex-E Pin Definitions

Pin Name	Dedicated Pin	Direction	Description
GCK0, GCK1, GCK2, GCK3	Yes	Input	Clock input pins that connect to Global Clock Buffers.
M0, M1, M2	Yes	Input	Mode pins are used to specify the configuration mode.
CCLK	Yes	Input or Output	The configuration Clock I/O pin: it is an input for SelectMAP and slave-serial modes, and output in master-serial mode. After configuration, it is input only, logic level = Don't Care.
PROGRAM	Yes	Input	Initiates a configuration sequence when asserted Low.
DONE	Yes	Bidirectional	Indicates that configuration loading is complete, and that the start-up sequence is in progress. The output can be open drain.
INIT	No	Bidirectional (Open-drain)	When Low, indicates that the configuration memory is being cleared. The pin becomes a user I/O after configuration.
BUSY/DOUT	No	Output	In SelectMAP mode, BUSY controls the rate at which configuration data is loaded. The pin becomes a user I/O after configuration unless the SelectMAP port is retained. In bit-serial modes, DOUT provides preamble and configuration data to downstream devices in a daisy-chain. The pin becomes a user I/O after configuration.
D0/DIN, D1, D2, D3, D4, D5, D6, D7	No	Input or Output	In SelectMAP mode, D0-7 are configuration data pins. These pins become user I/Os after configuration unless the SelectMAP port is retained. In bit-serial modes, DIN is the single data input. This pin becomes a user I/O after configuration.
WRITE	No	Input	In SelectMAP mode, the active-low Write Enable signal. The pin becomes a user I/O after configuration unless the SelectMAP port is retained.
CS	No	Input	In SelectMAP mode, the active-low Chip Select signal. The pin becomes a user I/O after configuration unless the SelectMAP port is retained.
TDI, TDO, TMS, TCK	Yes	Mixed	Boundary-scan Test-Access-Port pins, as defined in IEEE1149.1.
DXN, DXP	Yes	N/A	Temperature-sensing diode pins. (Anode: DXP, cathode: DXN)
V_{CCINT}	Yes	Input	Power-supply pins for the internal core logic.
V_{CCO}	Yes	Input	Power-supply pins for the output drivers (subject to banking rules)
V_{REF}	No	Input	Input threshold voltage pins. Become user I/Os when an external threshold voltage is not needed (subject to banking rules).
GND	Yes	Input	Ground

Pinout Differences Between Virtex and Virtex-E Families

The same device in the same package for the Virtex-E and Virtex families are pin-compatible with some minor exceptions, listed in Table 1.

XCV200E Device, FG456 Package

The Virtex-E XCV200E has two I/O pins swapped with the Virtex XCV200 to accommodate differential clock pairing.

XCV300E Device, BG432 Package

The Virtex-E XCV300E has eight pins (B26, C7, F1, F30, S AE29, AF1, AH8, and AH24) connected to V_{CCINT} that are not connected in the Virtex XCV300.

XCV400E Device, FG676 Package

The Virtex-E XCV400E has two I/O pins swapped with the Virtex XCV400 to accommodate differential clock pairing.

All Devices, PQ240 and HQ240 Packages

The Virtex devices in PQ240 and HQ240 packages do not have V_{CCO} banking, but Virtex-E devices do. To achieve this, eight Virtex I/O pins (P232, P207, P176, P146, P116, P85, P55, and P25) are now VCCO pins in the Virtex-E family. This change also requires one Virtex I/O or VREF pin to be swapped with a standard I/O pin.

Additionally, accommodating differential clock input pairs in Virtex-E caused some IO_V_{REF} differences in the XCV400E and XCV600E devices only. Virtex IO_V_{REF} pins P215 and P87 are Virtex-E IO_V_{REF} pins P216 and P86, respectively. Virtex-E pins P215 and P87 are IO_DLL.

Table 1: **Pinout Differences Summary**

Part	Package	Pins	Virtex	Virtex-E
XCV200	FG456	E11, U11	I/O	No Connect
		B11, AA11	No Connect	IO_LVDS_DLL
XCV300	BG432	B26, C7, F1, F30, AE29, AF1, AH8, and AH24	No Connect	V_{CCINT}
XCV400	FG676	D13, Y13	I/O	No Connect
		B13, AF13	No Connect	IO_LVDS_DLL
XCV400/600	PQ240/HQ240	P215, P87	IO_V_{REF}	IO_LVDS_DLL
		P216, P86	I/O	IO_V_{REF}
All	PQ240/HQ240	P232, P207, P176, P146, P116, P85, P55, and P25	I/O	V_{CCO}
		P231	I/O	IO_V_{REF}

Low Voltage Differential Signals

The Virtex-E family incorporates low-voltage signalling (LVDS and LVPECL). Two pins are utilized for these signals to be connected to a Virtex-E device. These are known as differential pin pairs. Each differential pin pair has a Positive (P) and a Negative (N) pin. These pairs are labeled in the following manner.

IO_L#[P/N]

where

L = LVDS or LVPECL pin
# = Pin Pair Number
P = Positive
N = Negative

I/O pins for differential signals can either be synchronous or asynchronous, input or output. The pin pairs can be used for synchronous input and output signals as well as asynchronous input signals. However, only some of the low-voltage pairs can be used for asynchronous output signals.

DIfferential signals require the pins of a pair to switch almost simultaneously. If the signals driving the pins are from IOB flip-flops, they are synchronous. If the signals driving the pins are from internal logic, they are asynchronous. Table 2 defines the names and function of the different types of low-voltage pin pairs in the Virtex-E family.

Table 2: **LVDS Pin Pairs**

Pin Name	Description
IO_L#[P/N] Example: IO_L22N	Represents a general IO or a synchronous input/output differential signal. When used as a differential signal, N means Negative I/O and P means Positive I/O.
IO_L#[P/N]_Y Example: IO_L22N_Y	Represents a general IO or a synchronous input/output differential signal, or a part-dependent asynchronous output differential signal.
IO_L#[P/N]_YY Example: O_L22N_YY	Represents a general IO or a synchronous input/output differential signal, or an asynchronous output differential signal.
IO_LVDS_DLL_L#[P/N] Example: IO_LVDS_DLL_L16N	Represents a general IO or a synchronous input/output differential signal, a differential clock input signal, or a DLL input. When used as a differential clock input, this pin is paired with the adjacent GCK pin. The GCK pin is always the positive input in the differential clock input configuration.

Virtex-E Package Pinouts

The Virtex-E family of FPGAs is available in 12 popular packages, including chip-scale, plastic and high heat-dissipation quad flat packs, and ball grid and fine-pitch ball grid arrays. Family members have footprint compatibility across devices provided in the same package. The pinout tables in this section indicate function, pin, and bank information for each package/device combination. Following each pinout table is an additional table summarizing information specific to differential pin pairs for all devices provided in that package.

CS144 Chip-Scale Package

XCV50E, XCV100E, XCV200E, XCV300E and XCV400E devices in CS144 Chip-scale packages have footprint compatibility. In the CS144 package, bank pairs that share a side are internally interconnected, permitting four choices for V_{CCO}. See Table 3.

Table 3: **I/O Bank Pairs and Shared Vcco Pins**

Paired Banks	Shared V_{CCO} Pins
Banks 0 & 1	A2, A13, D7
Banks 2 & 3	B12, G11, M13
Banks 4 & 5	N1, N7, N13
Banks 6 & 7	B2, G2, M2

Pins labeled I0_VREF can be used as either in all parts unless device-dependent, as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 4, see Table 5 is Differential Pair information.

Notes:
1. V_{REF} or I/O option only in the XCV200E; otherwise, I/O option only.
2. V_{REF} or I/O option only in the XCV100E, 200E; otherwise, I/O option only.

CS144 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

Table 5: **CS144 Differential Pin Pair Summary XCV50E, XCV100E, XCV200E**

Note 1: AO in the XCV50E

PQ240 Plastic Quad Flat-Pack Packages

XCV50E, XCV100E, XCV200E, XCV300E and XCV400E devices in PQ240 Plastic Flat-pack packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 6, see Table 7 for Differential Pair information.

3. V_{REF} or I/O option only in the XCV400E; otherwise, I/O option only.

PQ240 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

HQ240 High-Heat Quad Flat-Pack Packages

XCV600E and XCV1000E devices in High-heat dissipation Quad Flat-pack packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 8, see Table 9 for Differential Pair information.

Note 1: AO in the XCV600E.

BG352 Ball Grid Array Packages

XCV100E, XCV200E, and XCV300E devices in BG352 Ball Grid Array packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 10, see Table 11 for Differential Pair information.

Notes:
1. No Connect in the XCV100E.
2. V_{REF} or I/O option only in the XCV200E and XCV300E; otherwise, I/O option only.

BG352 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A check (√) in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock

2. AO in the XCV200E.

BG432 Ball Grid Array Packages

XCV300E, XCV400E, and XCV600E devices in BG432 Ball Grid Array packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 12, see Table 13 for Differential Pair information.

BG432 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

Table 13: **BG432 Differential Pin Pair Summary XCV300E, XCV400E, XC600E**

BG560 Ball Grid Array Packages

XCV1000E, XCV1600E, and XCV2000E devices in BG560 Ball Grid Array packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 14, see Table 15 for Differential Pair information.

4. V_{REF} or I/O option only in the XCV600E, 1000E, 1600E, & 2000E; otherwise, I/O option only.

BG560 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG256 Fine-Pitch Ball Grid Array Packages

XCV50E, XCV100E, XCV200E, and XCV300E devices in FG256 fine-pitch Ball Grid Array packages have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 16, see Table 17 for Differential Pair information.

FG256 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG456 Fine-Pitch Ball Grid Array Packages

XCV200E and XCV300E devices in FG456 fine-pitch Ball Grid Array packages have footprint compatibility. Pins labeled I0_VREF can be used as either in both devices provided in this package. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 18, see Table 19 for Differential Pair information.

Note 1: NC in the XCV200E device.

FG456 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG676 Fine-Pitch Ball Grid Array Package

XCV400E and XCV600E devices in the FG676 fine-pitch Ball Grid Array package have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 20, see Table 21 for Differential Pair information.

1. NC in the XCV400E.
2. V_{REF} or I/O option only in the XCV600E; otherwise, I/O option only.

FG676 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG680 Fine-Pitch Ball Grid Array Package

XCV600E, XCV1000E, XCV1600E, and XCV2000E devices in the FG680 fine-pitch Ball Grid Array package have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 22, see Table 23 for Differential Pair information.

3. V_{REF} or I/O option only in the XCV2000E; otherwise, I/O option only.

FG680 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG860 Fine-Pitch Ball Grid Array Package

XCV1000E, XCV1600E, and XCV2000E devices in the FG680 fine-pitch Ball Grid Array package have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 24, see Table 25 for Differential Pair information.

Notes:
1. V_{REF} or I/O option only in the XCV1600E, 2000E; otherwise, I/O option only.
2. V_{REF} or I/O option only in the XCV2000E; otherwise, I/O option only.

FG860 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG900 Fine-Pitch Ball Grid Array Package

XCV600E, XCV1000E, and XCV1600E devices in the FG900 fine-pitch Ball Grid Array package have footprint compatibility. Pins labeled I0_VREF can be used as either in all parts unless device-dependent as indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 26, see Table 27 for Differential Pair information.

Notes:

1. V_{REF} or I/O option only in the XCV1000E and XCV1600E; otherwise, I/O option only.
2. V_{REF} or I/O option only in the XCV1600E; otherwise, I/O option only.
3. I/O option only in the XCV600E.
4. No Connect in the XCV600E.
5. No Connect in the XCV600E, 1000E.

FG900 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

FG1156 Fine-Pitch Ball Grid Array Package
CG1156 Ceramic Ball Grid Array Package

XCV1000E, XCV1600E, XCV2000E, and XCV2600E devices in the FG1156 fine-pitch Ball Grid Array package and XCV3200E device in the CG1156 package have footprint compatibility. Pins labeled IO_VREF can be used as either V_{REF} or general io unless indicated in the footnotes. If the pin is not used as V_{REF}, it can be used as general I/O. Immediately following Table 28, see Table 29 for Differential Pair information.

Notes:

1. V_{REF} or I/O option only in the XCV1600E, XCV2000E, XCV2600E, and XCV3200E; otherwise, I/O option only.
2. V_{REF} or I/O option only in the XCV2000E, XCV2600E, and XCV3200E; otherwise, I/O option only.
3. No Connect in the XCV1000E, XCV1600E.
4. No Connect in the XCV1000E.
5. I/O in the XCV1000E.

FG1156 / CG1156 Differential Pin Pairs

Virtex-E devices have differential pin pairs that can also provide other functions when not used as a differential pair. A √ in the AO column indicates that the pin pair can be used as an asynchronous output for all devices provided in this package. Pairs with a note number in the AO column are device dependent. They can have asynchronous outputs if the pin pair are in the same CLB row and column in the device. Numbers in this column refer to footnotes that indicate which devices have pin pairs than can be asynchronous outputs. The Other Functions column indicates alternative function(s) not available when the pair is used as a differential pair or differential clock.

Table 29: **FG1156 Differential Pin Pair Summary: XCV1000E, XCV1600E, XCV2000E, XCV2600E CG1156 Differential Pin Pair Summary: XCV3200E**

Revision History

The following table shows the revision history for this document.

Date	Version	Revision
12/7/99	1.0	Initial Xilinx release.
1/10/00	1.1	Re-released with spd.txt v. 1.18, FG860/900/1156 package information, and additional DLL, Select RAM and SelectI/O information.
1/28/00	1.2	Added Delay Measurement Methodology table, updated SelectI/O section, Figures 30, 54, & 55, text explaining Table 5, T_{BYP} values, buffered Hex Line info, p. 8, I/O Timing Measurement notes, notes for Tables 15, 16, and corrected F1156 pinout table footnote references.
2/29/00	1.3	Updated pinout tables, V_{CC} page 20, and corrected Figure 20.
5/23/00	1.4	Correction to table on p. 22.
7/10/00	1.5	• Numerous minor edits. • Data sheet upgraded to Preliminary. • Preview -8 numbers added to **Virtex-E Electrical Characteristics** tables.
8/1/00	1.6	• Reformatted entire document to follow new style guidelines. • Changed speed grade values in tables on pages 35-37.
9/20/00	1.7	• Min values added to **Virtex-E Electrical Characteristics** tables. • XCV2600E and XCV3200E numbers added to **Virtex-E Electrical Characteristics** tables (Module 3). • Corrected user I/O count for XCV100E device in Table 1 (Module 1). • Changed several pins to “No Connect in the XCV100E“ and removed duplicate V_{CCINT} pins in Table ~ (Module 4). • Changed pin J10 to “No connect in XCV600E” in Table 74 (Module 4). • Changed pin J30 to “V_{REF} or I/O option only in the XCV600E” in Table 74 (Module 4). • Corrected pair 18 in Table 75 (Module 4) to be “AO in the XCV1000E, XCV1600E“.
11/20/00	1.8	• Upgraded speed grade -8 numbers in **Virtex-E Electrical Characteristics** tables to Preliminary. • Updated minimums in Table 13 and added notes to Table 14. • Added to note 2 to **Absolute Maximum Ratings**. • Changed speed grade -8 numbers for $T_{SHCKO32}$, T_{REG}, T_{BCCS}, and T_{ICKOF}. • Changed all minimum hold times to –0.4 under **Global Clock Set-Up and Hold for LVTTL Standard, with DLL**. • Revised maximum T_{DLLPW} in -6 speed grade for **DLL Timing Parameters**. • Changed GCLK0 to BA22 for FG860 package in Table 46.
2/12/01	1.9	• Revised footnote for Table 14. • Added numbers to **Virtex-E Electrical Characteristics** tables for XCV1000E and XCV2000E devices. • Updated Table 27 and Table 78 to include values for XCV400E and XCV600E devices. • Revised Table 62 to include pinout information for the XCV400E and XCV600E devices in the BG560 package. • Updated footnotes 1 and 2 for Table 76 to include XCV2600E and XCV3200E devices.

Date	Version	Revision
4/2/01	2.0	• Updated numerous values in **Virtex-E Switching Characteristics** tables. • Changed pinout table footnotes from "V_{REF} option only" to "V_{REF} or I/O option only" to improve clarity. • Converted file to modularized format. See the **Virtex-E Data Sheet** section.
7/26/01	2.1	• Changed pinout table footnotes from "V_{REF} or I/O option only" to "V_{REF} or I/O option only; otherwise I/O only" to improve clarity. • Changed designation for pin pair 300 in Table 29 from AO to footnote 9.

Virtex-E Data Sheet

The Virtex-E Data Sheet contains the following modules:

- DS022-1, Virtex-E 1.8V FPGAs:
  Introduction and Ordering Information (Module 1)
- DS022-2, Virtex-E 1.8V FPGAs:
  Functional Description (Module 2)
- DS022-3, Virtex-E 1.8V FPGAs:
  DC and Switching Characteristics (Module 3)
- DS022-4, Virtex-E 1.8V FPGAs:
  Pinout Tables (Module 4)
