www.ashtonmetzler.com**

Goals

- ▶ Goal of the Conference:
 - To describe how the attendees can deploy a Business Enabling Network Function
- ▶ Goals of this Session:
 - To exemplify what is meant by a Business Enabling Network Function
 - To describe the changing role of the networking professional
 - To describe the changing enterprise WAN infrastructure
 - To identify conference sessions that will examine these trends in greater detail

Jim Metzler's Premise #1

- ▶ In order to successfully run a Business Enabling Network Organization, IT professionals must do two things. They are:
 - Operate as an effective utility. By utility is meant a network infrastructure which has a low unit cost, is highly reliable, widely available, and which offers an appropriate level of functionality.
 - Identify opportunities in which an investment in IT will help your company better compete in the marketplace.

Agenda

- ▶ Industry Trends
- ▶ What does it mean to be a Business Enabling Network Organization
- ▶ The Changing Role of the Networking professional
- ▶ The Changing WAN Infrastructure
- ▶ Pulling it Together

Where We Came From - The Requirements

- ▶ The pace of business change was relatively slow
- ▶ Few companies did significant networking outside of their country's borders
- ▶ Data communications used to stay virtually 100% within a company's boundary
- ▶ Teleworkers were the exception
- ▶ Major new applications took 18+ months to develop and deploy
- ▶ Data communications consisted largely of inquiry/response types of applications along with moderate sized file transfers

Where We Came From - The Network

- ▶ Separate voice and data networks in the mid 1980s gave way to integrated (a.k.a., *Private*) T1/TDM networks in the early to mid 1990s.
- ▶ In the mid 1990s, the networks separated again, with voice going to Software Defined Networks (SDNs) and data to Frame Relay
- ▶ Voice ran over a circuit switched network
- ▶ LANs were almost always built on shared media
- ▶ There was a huge gap between the network organization and the Business Unit Managers
- ▶ Few people seriously thought that networking was strategic

Where We Are Today - The Requirements

- ▶ The pace of business change is relentless
- ▶ Many companies do significant networking outside of their company's borders
- ▶ Data communications flows without boundaries
- ▶ Teleworkers are the norm
- ▶ New applications, and sources of content, can come online virtually overnight
- ▶ Data communications still consists of traditional voice and data, but other forms of content are also common

Where We Are Today - the Network

- ▶ LANs: We have widely deployed Layer 2 and Layer 3 switching and are beginning to deploy switching at layers 4 – 7.
- ▶ Remote access: Dial up VPNs are rapidly replacing POTS and 800 numbers as the transmission service of choice
- ▶ WANs: Fundamental shifts are potentially underway
- ▶ Voice still runs primarily over a circuit switched network, but there is growing interest in VoIP
- ▶ There is still a gap between the network organization and the Business Unit Managers, but it is closing
- ▶ In many companies, the network is indeed strategic

Where we are Heading: Fundamental Business Changes

- ▶ The way we conduct business is steadily and irreversibly changing. For example:
 - Companies in general, and IT organizations in particular, will continue to make more use of selective sourcing.
 - Companies will increasingly “bet their business” on their IT infrastructure.
 - IT will become increasingly strategic to companies of all sizes, and in most industry segments.
- ▶ Yet currently there are tremendous cost pressures being felt by most IT organizations.

Movement to eBusiness

■ Significant movement (4-5)

■ Moderate movement (3)

■ Little or No movement (1-2)

Movement Already Made

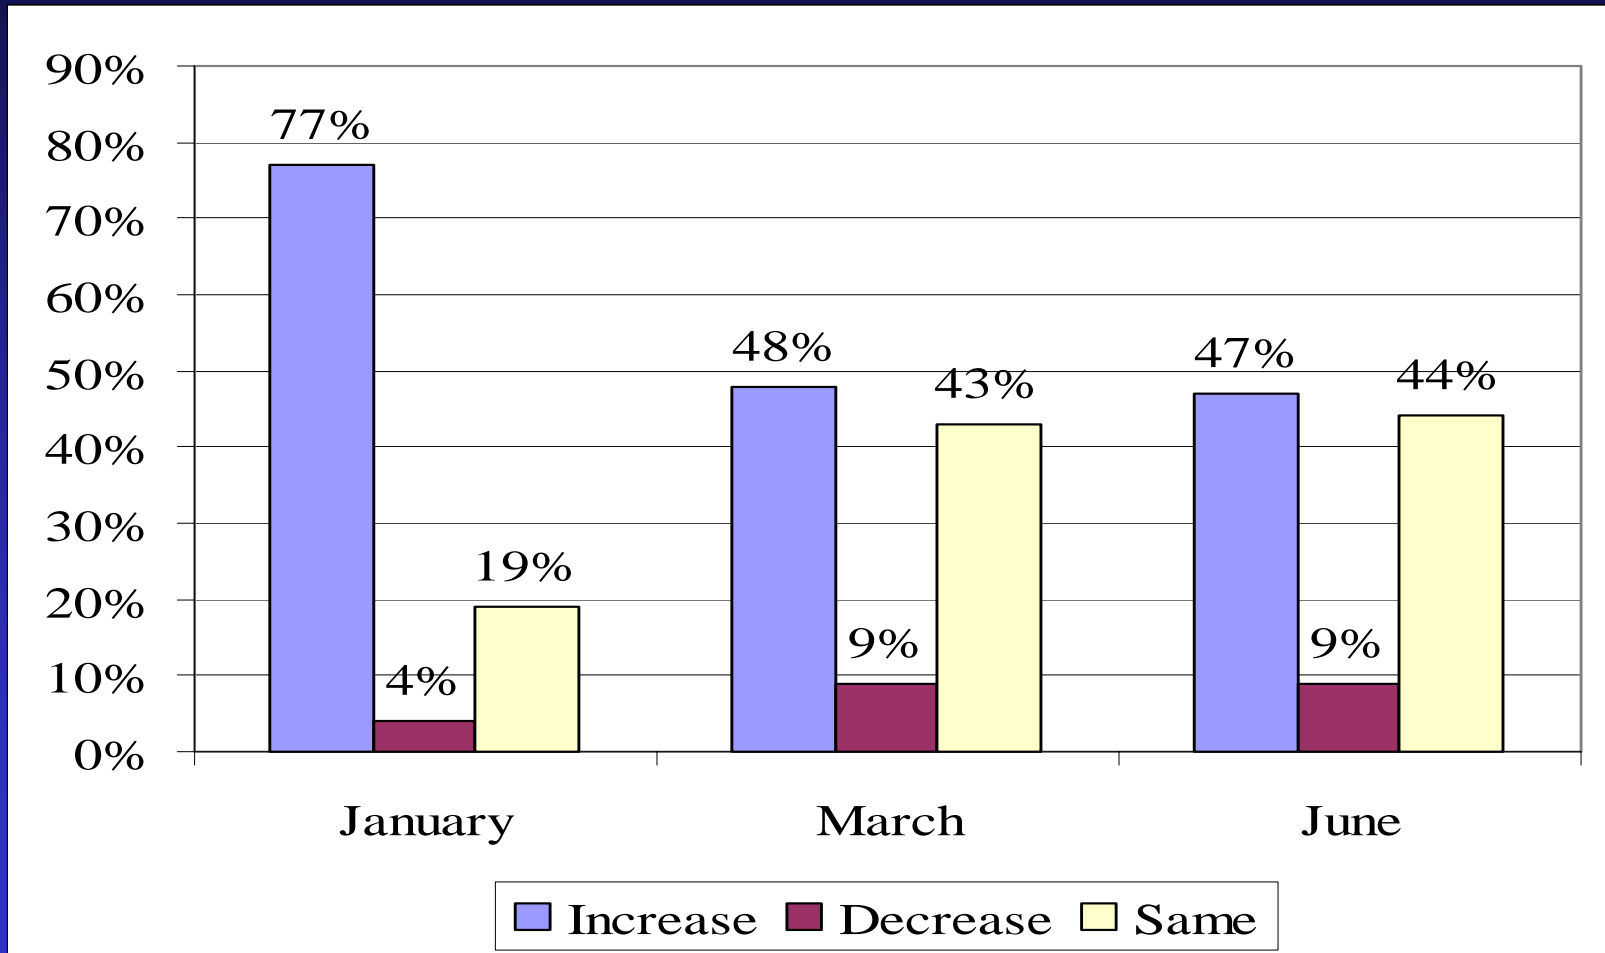

Movement Over Next 12 Months

Agenda

- ▶ Industry Trends
- ▶ What does it mean to be a Business Enabling Network Organization
- ▶ The Changing Role of the Networking professional
- ▶ The Changing WAN Infrastructure
- ▶ Pulling it Together

Percentage of Customer Service Calls Handled Electronically Without Intervention

▶ Financial Services	40%
▶ Banking	34%
▶ Media and Entertainment	25%
▶ Utilities	23%
▶ Insurance	21%
▶ General Merchandising	19%
▶ Health Care and Medical	17%
▶ Chemicals	9%
▶ Energy	8%
▶ Industry Average	21%

Jim Metzler's Premise #2

- ▶ In order to successfully run a Business Enabling Network Organization, IT organizations must:
 - Identify the factors it can influence, if not control
 - Market away certain other factors

Example of Premise #2

Total Cost of Networking =

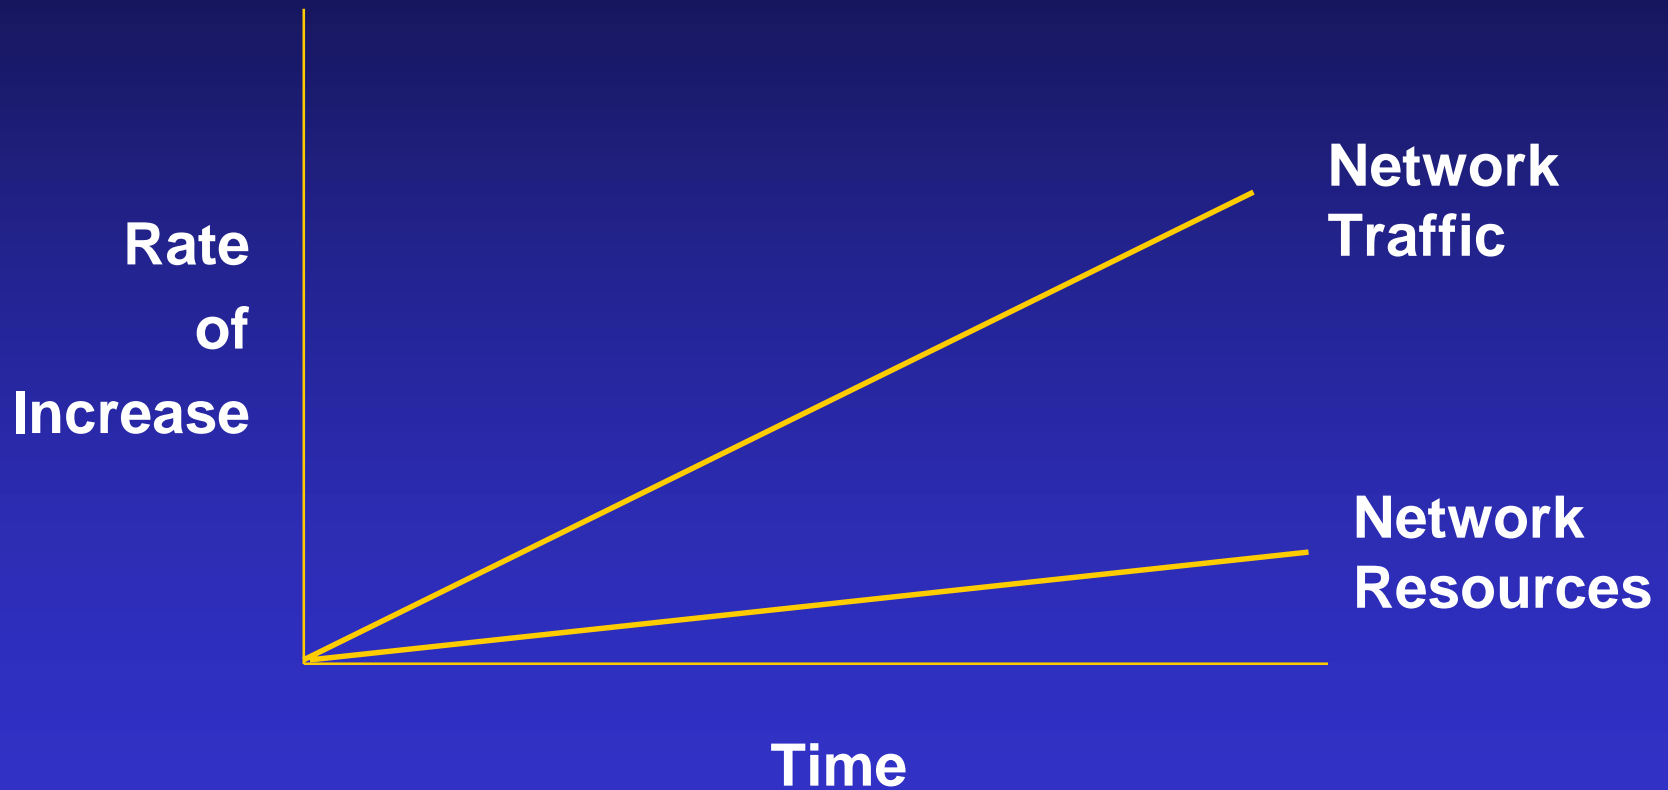

The
Unit
Cost

X

The
Number
of Units

Growth in Network Traffic vs. Network Resources

Jim Metzler's Premise #3

- ▶ In order to successfully run a Business Enabling Network Organization, IT organizations must continually:
 - Evaluate and deploy new technologies and external service offerings
 - Change their approach to delivering services

Background on Acme, Inc.

- ▶ Professional services organization
- ▶ 500 employees, 400 of whom are consultants
- ▶ One headquarters site that houses 100 employees
- ▶ Ten branch offices that house 40 employees on the average
- ▶ On the average, Acme charges \$200/hour for their consultants
- ▶ On the average, the consultants are billable 65% of the (mythical) 40 hour week

How can Acme's IT Department become a Business Enabling IT Organization?

▶ Directly Drive Revenue

- Drive up the billable hours of the average consultant
 - Make them more effective doing projects and responding to RFPs while they are traveling
 - Wireless communications
 - Unified Messaging
- Drive up the billable rate of the average consultant
 - Effective access to information in general, and training in particular
 - Content Delivery Networking

How can Acme's IT Department become a Business Enabling IT Organization?

- ▶ Indirectly Drive Revenue:
 - Make it easier to attract and retain consultants by making their jobs easier and more fulfilling
 - Automated T&E
 - Easier time reporting
 - Access to technical information and Training
 - Content Deliver Networking
 - Security

How can Acme's IT Department become a Business Enabling IT Organization?

- ▶ Reduce Cost:
 - Drive down the unit cost of IT
 - VPNs
 - Outsourcing
 - MAN Services
 - VoIP???
 - Facilitate hotelling
- ▶ Enable B2B communications
 - Applications Management
 - VPNs

IT Budget as a Percentage of Projected Revenue

▶ Financial Services	14%
▶ Banking	8%
▶ Insurance	6%
▶ Specialty Merchandising	6%
▶ Consulting & Business Services	4%
▶ Health Care and Medical	3%
▶ Utilities	3%
▶ Food & Beverage Processing	1%
▶ Industry Average:	4%

Source: Information Week

How can Acme's IT Department become a Business Enabling IT Organization?

- ▶ Improve the deployment of new services, both within Acme, and between Acme and its business partners
 - Service Management
 - Outsourcing

Agenda

- ▶ Industry Trends
- ▶ What does it mean to be a Business Enabling Network Organization
- ▶ The Changing Role of the Networking professional
- ▶ The Changing WAN Infrastructure
- ▶ Pulling it Together

Position of Networking within your Company

■ Justifies Investment ■ Doesn't Justify Investment

Ability to add headcount

Source: Ashton, Metzler & Associates and Key3Media

Involvement of Networking Department in eBusiness

■ Significantly involved (4-5) ■ Moderately involved (3) ■ Little or No involvement (1-2)

Involvement of Networking Department Over Last 12 Months

Involvement of Networking Department over next 12 months

Source: Ashton, Metzler & Associates and Key3Media

Reasons Networking Department is Not More Involved

Source: Ashton, Metzler & Associates and Key3Media

How has the movement to eBusiness affected the jobs of Networking professionals?

▶ Created more opportunities for me	48%
▶ No affect	40%
▶ Made my job better	6%
▶ Left me with fewer opportunities	4%
▶ Made my job worse	2%
▶ Threatened my job	1%

Source: Ashton, Metzler & Associates and Key3Media

Where we are Heading: The Changing Role of the Networking Professional

- ▶ The role of the networking professional is steadily and irreversibly changing. For example, networking professionals are increasingly:
 - Spending more of their time with the senior management of their companies
 - Spending more of their time managing their vendors
 - Focused on technologies at all layers of the OSI protocol stack

Agenda

- ▶ Industry Trends
- ▶ What does it mean to be a Business Enabling Network Organization
- ▶ The Changing Role of the Networking professional
- ▶ The Changing WAN Infrastructure
- ▶ Pulling it Together

Change to WAN Infrastructure

85% report their company plans on making at least some changes to their WAN infrastructure over the next year

■ 5=Total re-engineering of the WAN ■ 4 ■ 3=Some changes to the WAN ■ 2 ■ 1=No changes to the WAN

Source: Ashton, Metzler & Associates and Key3Media

Observation

- ▶ When the survey respondents were asked how much of a given technology, such as Frame Relay or ATM, they currently had in their network, typically around 10% answered “Don’t Know”.
- ▶ However, when asked how much of those technologies they would be using a year from now, the percentage of “Don’t Know” jumped to between twenty and thirty percent.

Agenda

- ▶ Industry Trends
- ▶ What does it mean to be a Business Enabling Network Organization
- ▶ The Changing Role of the Networking professional
- ▶ The Changing WAN Infrastructure
- ▶ Pulling it Together

Networking Challenges for a Business Enabling Network Organization

- ▶ Lower unit cost
- ▶ Higher reliability, as appropriate
- ▶ Enhanced Security
- ▶ Greater Scalability
- ▶ Greater extensibility
- ▶ Improved Provisioning of Service

Jim Metzler's Premise #4

- ▶ In order successfully deploy a Business Enabling Networking Function, Networking Professionals must do a good job at managing:
 - The expectations of their stakeholders (Stakeholder Management)
 - Their human resources – both internal and external (Human Resources Management)
 - A spectrum or networking technologies and services (Technology Management)

Monday's Program

- ▶ Stakeholder Management:
 - Running a Business Enabling IT Organization
9:30 to 10:30
 - The Global Network
4:30 to 5:30
- ▶ Technology Management
 - Security
10:45 to 11:45

Monday's Program

- ▶ Technology Management:
 - Wireless
1:00 to 2:00
 - New Aged MAN
2:00 to 2:45
 - Applications Management
3:00 to 3:45
 - Voice Over IP
3:45 to 4:30

Thank you!
